

Vi Peel

What is a VI Peel and how does it work?

The ViPeel contains a synergistic blend of powerful ingredients, suitable for all skin types. This peel provides dramatic results with virtually no pain, no skin preparation, and little downtime.

What can the ViPeel do for me?

- Improve the overall tone, texture and clarity of the skin
- Reduce or eliminate age spots, freckles, pigmentation and melasma
- Clear acne skin conditions
- Reduce or eliminate acne scars
- Stimulate the production of collagen for firmer, youthful-looking skin

How often should I have treatment, and how many will I need?

The ViPeel treatments are patient specific depending on the concern and the desired outcome. On average it has been found that *1 peel every month for 3 months* is a sufficient amount of treatments to significant improvement. Depending on the specific concern, the number of sessions may be increased or decreased depending on the desired result.

What results can I expect?

It is important to understand that while results are long-lasting, it cannot be guaranteed that results are permanent. Factors such as ageing, damage to the skin or the development of a medical condition affecting the skin may impact the results achieved. Hormonal changes may also increase pigmentation.

What will I look like?

The ViPeel will be applied by one of our clinicians. You will experience a stinging sensation on application. The ViPeel will remain on the skin for 4 hours post application. All patients will be given a take home package with products and instructions on how to remove the peel after 4 hours as well as the aftercare for the first couple of days. Initially the skin will appear dark while the peel is on and until it is removed. The skin will be tight the first day post treatment and will then start to peel on the second or third day. This will last for several days. Recommended aftercare advice will be given after each treatment to help to achieve the best results possible and to minimise complications.

Aftercare Information for VI Peel

Please ensure that you follow the instructions given to you by your clinician in the aftercare booklet as this ensures maximum results.

Please note the following:

- Never peel or force the skin off as this may cause scarring. Your skin will naturally slough off when washing.
- You may take a small clean scissors and trim the peeling skin but exercise extreme caution if doing so.
- If the skin becomes irritated when using moisturiser or SPF discontinue use and use the hydrocortisone cream. Contact your clinician.
- Please note that peeling may not occur in a uniform manner, some areas may peel more than others or not at all due to the varying thickness of the skin on the face as well as the degree of damage to the skin.
