

Volite Juvederm® Treatment at PHI Clinic

What is Volite® and what is it used for?

As the skin ages, the hyaluronic acid we once produced to provide a plump glowing appearance to the skin starts to diminish and our skin becomes dull and lack lustre. The function of hyaluronic acid is to bind and absorb water molecules in the skin to achieve to volume

At Phi Clinic we use JUVÉDERM® range of dermal fillers from Allergan, the world leaders of surgical and non-surgical aesthetic products. The Volite® product is not a filler, but a skin rejuvenating product and is made from hyaluronic acid, which naturally occurs in our bodies. Volite® is used to return luminosity, moisture and some volume to the skin to give a plump, youthful and rejuvenated appearance.

How many session will I need, and how far apart can I have them?

The procedure takes around 30-45 minutes and patients can expect to notice the effects for as long as 6 months after treatment.

Am I a suitable candidate?

Volite® can be used on a wide range of patients, and is primarily used for skin rejuvenation and skin quality enhancement.

What areas can be treated?

Full face, neck, décolletage and hands can be treated to rejuvenate the appearance of the skin

Who will carry out the treatment?

The Volite® treatment will be carried out by our highly trained clinicians.

Is there any downtime?

There is no downtime associated with this treatment, but patients may expect some slight bruising and swelling in the treated areas. This will relax after a few days.

How much will it cost?

Prices start from £400
